Journal of Computational and Applied Mathematics 46 (1993) 465–466
North-Holland

Author Index to Volume 46 (1993)

(The issue number is given in front of the page numbers.)

Ammar, G.S., W.B. Gragg and **L. Reichel,** An analogue for Szegő polynomials of the Clenshaw algorithm (1–2) 211–216

Baltus, C., Truncation error bounds for the composition of limit-periodic linear fractional transformations (3) 395–404
Baratchart, L. and **M. Zerner,** On the recovery of functions from pointwise boundary values in a Hardy–Sobolev class of the disk (1–2) 255–269
Barlow, R.E. and **F. Spizzichino,** Schur-concave survival functions and survival analysis (3) 437–447
Barnard, R.W., K. Pearce and **R.S. Varga,** An application from partial sums of e^z to a problem in several complex variables (1–2) 271–279
Bennett, G.K., see **Melloy, B.J.** (3) 405–413
Berrut, J.-P., A formula for optimal integration in H^2 (1–2) 199–210
Bialecki, B. and **G. Fairweather,** Matrix decomposition algorithms for separable elliptic boundary value problems in two space dimensions (3) 369–386
Borwein, J.M. and **P.B. Borwein,** Class number three Ramanujan type series for $1/\pi$ (1–2) 281–290
Borwein, P.B., see **Borwein, J.M.** (1–2) 281–290
Boumenir, A., see **El-Gebeily, M.A.** (3) 345–355
Brezinski, C. and **A.C. Matos,** Least-squares orthogonal polynomials (1–2) 229–239

Carroll, J., A composite integration scheme for the numerical solution of systems of parabolic PDEs in one space dimension (3) 327–343
Chandler-Wilde, S.N., see **Hough, D.M.** (1–2) 29– 48
Chin, P. and **P.A. Forsyth,** A comparison of GMRES and CGSTAB accelerations for incompressible Navier–Stokes problems (3) 415–426

DeLillo, T.K. and **A.R. Elcrat,** A Fornberg-like conformal mapping method for slender regions (1–2) 49– 64
DeLillo, T.K. and **J.A. Pfaltzgraff,** Extremal distance, harmonic measure and numerical conformal mapping (1–2) 103–113

Elcrat, A.R., see **DeLillo, T.K.** (1–2) 49– 64
El-Gebeily, M.A., A. Boumenir and **M.B.M. Elgindi,** Existence and uniqueness of solutions of a class of two-point singular nonlinear boundary value problems (3) 345–355
Elgindi, M.B.M., see **El-Gebeily, M.A.** (3) 345–355
Elliott, G.H., see **Mason, J.C.** (1–2) 291–300

Fairweather, G., see **Bialecki, B.** (3) 369–386
Floryan, J.M. and **C. Zemach,** Schwarz–Christoffel methods for conformal mapping of regions with a periodic boundary (1–2) 77–102
Forsyth, P.A., see **Chin, P.** (3) 415–426

Gragg, W.B., Positive definite Toeplitz matrices, the Arnoldi process for isometric operators, and Gaussian quadrature on the unit circle (1–2) 183–198
Gragg, W.B., see **Ammar, G.S.** (1–2) 211–216
Greenhow, M., A complex variable method for the floating-body boundary-value problem (1–2) 115–128

Hough, D.M., J. Levesley and **S.N. Chandler-Wilde,** Numerical conformal mapping via Chebyshev weighted solutions of Symm's integral equation (1–2) 29– 48
Howell, L.H., Numerical conformal mapping of circular arc polygons (1–2) 7– 28

Iserles, A., A constructive approach to the Schröder equation (1–2) 301–314

Jagels, C. and **L. Reichel,** On the construction of Szegő polynomials (1–2) 241–254
Jones, W.B., W.J. Thron, O. Njåstad and **H. Waadeland,** Szegő polynomials applied to frequency analysis (1–2) 217–228

Levesley, J., see **Hough, D.M.** (1–2) 29– 48

Maier, R.S., Phase-type distributions and the structure of finite Markov chains (3) 449–453
Mason, J.C. and **G.H. Elliott,** Near-minimax complex approximation by four kinds of Chebyshev polynomial expansion (1–2) 291–300
Matos, A.C., see **Brezinski, C.** (1–2) 229–239
McCoy, P.A., Near-circularity of the error curve in Chebyshev approximation of solutions to a class of elliptic partial differential equations in the complex plane (1–2) 315–326

Elsevier Science Publishers B.V.

Melloy, B.J. and **G.K. Bennett,** Computing the exponential of an intensity matrix (3) 405–413
Miyakoda, T., Multiplicity estimating algorithm for zeros of a complex polynomial and its applications (3) 357–368

Njåstad, O., see **Jones, W.B.** (1–2) 217–228

Pan, K., Asymptotics for Szegő polynomials associated with Wiener–Levinson filters (3) 387–394
Pan, K., Strong and weak convergence of orthogonal systems of rational functions on the unit circle (3) 427–436
Papamichael, N. and **E.B. Saff,** Preface (1–2) 1– 5
Papamichael, N. and **E.B. Saff,** Local behaviour of the error in the Bergman kernel method for numerical conformal mapping (1–2) 65– 75
Pearce, K., see **Barnard, R.W.** (1–2) 271–279
Pfaltzgraff, J.A., see **DeLillo, T.K.** (1–2) 103–113

Reichel, L., see **Ammar, G.S.** (1–2) 211–216
Reichel, L., see **Jagels, C.** (1–2) 241–254
Saff, E.B., see **Papamichael, N.** (1–2) 1– 5
Saff, E.B., see **Papamichael, N.** (1–2) 65– 75
Salam, A., On a generalization of the ϵ-algorithm (3) 455–464
Spizzichino, F., see **Barlow, R.E.** (3) 437–447
Starke, G., Fejér–Walsh points for rational functions and their use in the ADI iterative method (1–2) 129–141

Thron, W.J., see **Jones, W.B.** (1–2) 217–228

Varga, R.S., see **Barnard, R.W.** (1–2) 271–279

Waadeland, H., see **Jones, W.B.** (1–2) 217–228
Wegert, E., Iterative methods for discrete nonlinear Riemann–Hilbert problems (1–2) 143–163
Wegmann, R., Extremal problems for harmonic mappings from the unit disc to convex regions (1–2) 165–181

Zemach, C., see **Floryan, J.M.** (1–2) 77–102
Zerner, M., see **Baratchart, L.** (1–2) 255–269
